S-CUT®

Authorized Consumables Package 501•601•701

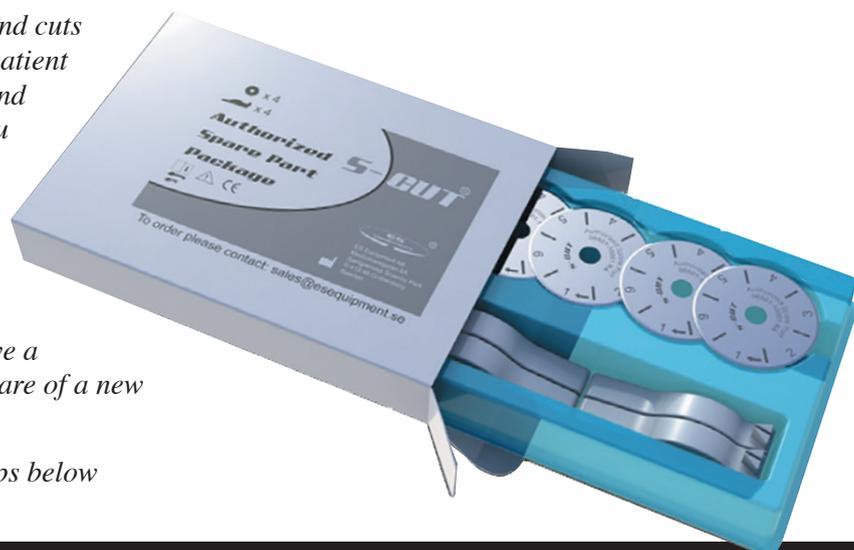

Manufactured
in Sweden by
ES Equipment AB

The cutting blade on your S-CUT is very sharp and cuts through most textile materials. When used on a patient the edge might have been blunt and we recommend to rotate the blade for optimal function. Once you have rotated the blade in a full circle and used all the six edges it is worn out and must be changed.

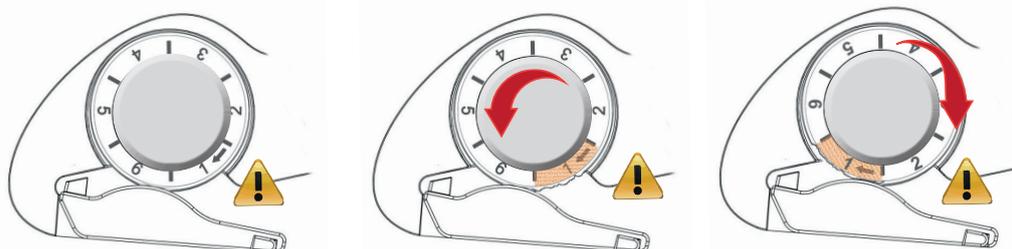

The ACP pack contains four blades and hygiene supports. Make sure you always have these parts available and also make sure you have a sharp cutting edge ready every time you'll take care of a new patient.

It is very easy to switch blade, just follow the steps below when the cutting blade is worn out.

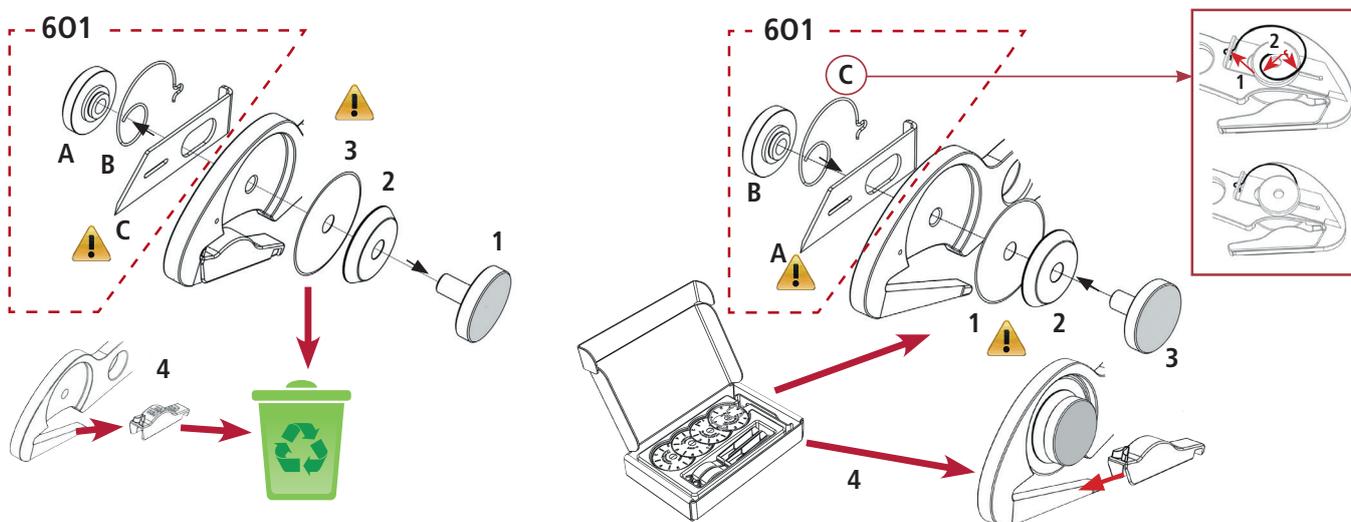

Adjust the cutting edge – change blade and support

Adjust

Change
